PROFILE

Data Engineering and Cloud Architect with 14+ years of experience, including 11+ years building scalable data platforms and enterprise data solutions. Expertise in data architecture, distributed systems, cloud platforms, governance, analytics, and platform modernization across AWS and GCP. Proven track record of driving technical strategy, leading cross-functional initiatives, mentoring engineers, and delivering reliable, scalable solutions that improve efficiency and business outcomes.

WORK EXPERIENCE

Senior Consultant - Data Engineering, [Visa](#)

04/2025 – Present

- Architected an enterprise reporting data platform using Hadoop, PySpark, SQL, and Airflow, integrating cross-domain payment data with scalable pipelines, governance, and quality controls.
- Led evaluation of enterprise data quality and observability platforms, assessing scalability, interoperability, lineage, and cloud/AI integration to inform enterprise platform selection and data quality strategy.
- Designed and delivered an enterprise-scale, event-driven data platform, enabling real-time data ingestion, data quality monitoring, and analytics across distributed data ecosystems.
- Led end-to-end delivery of data engineering initiatives, coordinating with Product, Architecture, DevOps, Analytics, and business stakeholders to prioritize work, manage technical risks, and deliver scalable, reliable data platforms.
- Designed and developed an AI-powered analytics agent leveraging business semantics and retrieval-augmented generation to provide contextual insights and natural-language analysis over enterprise KPI metrics.

Senior Data Engineer (Data Architect), [H&M](#)

06/2022 – 04/2025

- Architected the integration of 10+ enterprise data platforms and multiple ingestion systems into a unified cloud data foundation, establishing scalable batch and real-time data pipelines, governed data access, and standardized data capabilities across teams.
- Automated GCP infrastructure provisioning across multiple products using Terraform, including Cloud Run, BigQuery, GKE, and GCS, improving deployment consistency and reducing manual infrastructure effort.
- Contributed to team growth by conducting technical interviews, evaluating engineering candidates, and helping define hiring decisions aligned with platform and organizational needs.
- Designed and implemented scalable Apache Airflow workflows on Cloud Composer to support both batch and one-time data ingestion pipelines for marketing analytics and attribution platforms, improving processing efficiency by approximately 60% and enhancing operational reliability.
- Architected and implemented a Databricks automation framework for data validation, cutting manual effort by 85% while improving accuracy and efficiency.
- Optimized BigQuery transformation workloads processing TBs of Google Analytics data, improving query performance and scalability for enterprise analytics using dbt.

Senior Data Engineer, [Nike](#)

02/2021 – 06/2022

- Optimized data architecture for a demand forecasting product on AWS using DBT & Snowflake, reducing computation costs and time.
- Automated AWS resource provisioning across EC2, S3, and EMR using Terraform, reducing deployment time by approximately 60%.
- Led and mentored Data and DevOps engineers, providing technical direction, architecture guidance, design/code reviews, and day-to-day support across complex data engineering initiatives.

Senior Software Engineer, *Unisys India Pvt. Ltd. & Accenture Services Pvt. Ltd.*

08/2011 – 01/2021

- Owned Kafka-based event streaming infrastructure and high-volume ingestion pipelines processing millions of passenger and shipment events daily, enabling real-time validation, enrichment, and risk assessment across aviation and logistics domains.
- Designed and delivered enterprise event-driven data platforms using Kafka, Spark/PySpark, Databricks, and Azure, supporting scalable batch and streaming workloads across multiple enterprise customers.
- Architected and optimized data pipelines using Kafka, NiFi, StreamSets, and PySpark, improving scalability, reliability, and operational efficiency across high-volume workloads.
- Developed Python services and Flask APIs for predictive analytics, data processing, and cloud capacity optimization, alongside automated enterprise data collection workflows.
- Designed and orchestrated enterprise ETL and analytical data workflows using Azure Data Factory, Azure Synapse, and SQL, integrating multiple source systems for operational and business reporting.
- Built monitoring and optimization dashboards using Grafana and MySQL, identifying infrastructure inefficiencies and reducing costs by approximately \$100K per quarter.

TECHNICAL EXPERTISE**Data Architecture & Engineering:**

Data Architecture, Data Engineering, Data Modeling, Data Warehousing, Data Lakes, ETL/ELT, Distributed Data Systems, Batch & Streaming Processing, Event-Driven Architecture, Dimensional Modeling, OLAP, OLTP

Cloud & Platforms:

Cloud Architecture, AWS, GCP, Azure, Cloud-Native Data Platforms, Platform Modernization, Infrastructure as Code

Data Governance & Analytics:

Data Quality, Data Governance, Data Integration, Analytics Platforms, Data Observability

AI & Modern Data Engineering:

AI/ML Data Platforms, RAG, MCP, AI-Assisted Data Engineering

TECHNOLOGY STACK

Languages:

Python, SQL, PySpark

Data Platforms & Warehousing:

Databricks, BigQuery, Snowflake, Hive, Hadoop, dbt

Streaming & Orchestration:

Apache Kafka, Dataflow, Apache Flink, Apache Airflow, Azure Data Factory

Cloud & Infrastructure:

AWS, GCP, Azure, AWS Fargate, GKE, Kubernetes, Docker, Terraform, GitHub Actions

Databases & APIs:

PostgreSQL, MySQL, MongoDB, DynamoDB, Flask, REST APIs, API Gateway, AWS Lambda, Cloud Functions

AI & Developer Tools:

MCP, RAG, Cursor, Cline

DOMAIN EXPERIENCE

Payments & Financial Services, Retail & E-commerce, Supply Chain & Logistics, Travel & Aviation, Telecommunications, Marketing & Customer Analytics, Demand & Supply Planning, Data Governance & Quality

EDUCATION

B. M. S. College of Engineering, *Bachelor Of Engineering*
First Class with Distinction

08/2007 – 06/2011
